Education

Sikkim Manipal Institute of Technology - Sikkim Manipal University

2020 – 2024

Bachelor of Technology - Computer Science and Engineering

CGPA: 8.53

Coursework: Data Structures & Algorithms, Machine Learning, Artificial Intelligence, Software Engineering, Operating Systems, DBMS, Distributed Systems, Cloud Computing

Experience

Dell Technologies

Jan 2026 – Present

Software Development Engineer 2

Bengaluru, KA, India

- Built the **ITAssets Ops Copilot**, an AI assistant that lets IT support staff look up employee, device and incident records and make configuration changes in plain English, replacing manual searches across **5 separate consoles** and cutting lookups per support ticket from about five to under two.
- Made the assistant safe to trust in production: it runs only the **37 actions** a user's role permits, every change is previewed and confirmed before executing, and each is written to an audit log – making an AI-initiated change as traceable as a manual one.
- Kept answer quality measurable with a **500-question test suite** that runs on every change and blocks releases that lower accuracy, grounded policy answers in approved documentation so the assistant cites real sources, and added a backup model so an AI outage never affects the main dashboard.
- Built the employee-profile service in Node.js/TypeScript merging **7 HR, directory and device systems** in parallel, returning partial data when one is down, for **100K+ employees** – with a 20+ check rule engine surfacing context like expired passwords, new hires and VIP status in one call.
- Designed the four-tier access control and approval workflow on PostgreSQL with Azure AD sign-in, guards against duplicate requests and double approvals, and a config-driven query engine letting partner teams launch new reporting endpoints without a code release.
- **Skills:** TypeScript, Node.js, Express, PostgreSQL, pgvector, LLM tool calling, RAG, REST APIs, Azure AD OAuth2, Kubernetes

Dell Technologies

Aug 2024 – Dec 2025

Software Development Engineer 1

Bengaluru, KA, India

- Built the real-time control plane for the **Software Removal platform** on SignalR and WebSockets, with a RabbitMQ queue as a durable second channel, dispatching commands to **100,000+ Windows devices** across three regions at a **99.7% success rate**.
- Shipped the paired .NET Windows service agent that receives those commands, runs the removal on each machine and streams results back live, cutting the installer from **350 MB to 30 MB** and install time from **10 minutes to 30 seconds**.
- Architected the FastAPI service for **Dell Communique** turning plain-language briefs into ready-to-send email templates, recovering malformed output via a layered parser, lifting usable responses from **85% to 98%**; streaming cut first output from 4 seconds to 200 ms.
- Productionized Go services parallelizing three report aggregations to cut build time from **25 to 6 seconds**, and a title-matching engine reconciling **16,000 inconsistent software names** across 8 GB of inventory data, raising throughput nearly sevenfold.
- **Skills:** Python, Go, C#, .NET 8.0, SignalR, FastAPI, scikit-learn, PostgreSQL, Redis, RabbitMQ, Docker, Kubernetes, GitLab CI/CD

Dell Technologies

Jan 2024 – May 2024

Software Development Engineer Intern (Winter)

Bengaluru, KA, India

- Architected the training-request workflow engine for **Dell Digital People** (Node.js, GraphQL, PostgreSQL) as a state-machine approval model with ownership checks preventing duplicate submissions, replacing email approvals and cutting turnaround from **5 days to 1.5 days**; rebuilt the deploy pipeline, taking build time from 45 to 12 minutes.

Dell Technologies

May 2023 – Jul 2023

Software Development Engineer Intern (Summer)

Bengaluru, KA, India

- Built the sign-in layer for Dell's **SSL VPN third-party portal** as sole backend engineer, caching identity keys and profiles in Redis to cut authenticated request latency from **800 ms to 150 ms**, plus an async upload pipeline acknowledging vendor spreadsheets in **under 500 ms** while a background worker validates and loads rows across four tables.

Technical Skills

Languages: Python, TypeScript/JavaScript, Go, C#, SQL, Bash

AI & LLM: LLM tool calling & agents, RAG, prompt engineering, structured outputs, embeddings & vector search (pgvector), evaluation & golden datasets, guardrails, model fallback

Backend: FastAPI, Node.js/Express, ASP.NET Core 8 (SignalR), Go/Gin, GraphQL, REST APIs, OAuth2/JWT, RBAC

Data & Messaging: PostgreSQL, pgvector, SQLite, Redis, RabbitMQ, Elasticsearch

Cloud & Practices: Kubernetes, Docker, Azure AD, HashiCorp Vault, GitLab CI/CD, observability, canary releases, automated testing

Patents & Invention Disclosures

Inventor - "On-Device Privacy-Preserving Prompt Refinement Using Cluster-Conditioned Local Agents", *Dell Technologies, 2026*

Co-Inventor - "Self-Adjustable Display System with Wavefront Sensing & PSF-Based Pre-Compensation", *Dell Technologies, 2026*

Co-inventor - "Behavioral Graph Intelligence for Semantic Expansion and Query Disambiguation", *Dell Technologies, 2026*

Co-inventor - "Agentic AI-Driven Persona-Based Software Removal, Reinstallation Prevention and Governance", *Dell Technologies, 2025*

Honors & Awards

Dell Innovation Award (2025) | Dell Extraordinary Award (2025, twice) | Dell Bravo Award (2026, 2025) | Dell

Hack-2-Hire Hackathon Winner (2022) | Second Position, IETE Innovation Challenge (2019)
